

# PROJECT SPOTLIGHT

## PANDEMIC-FRIENDLY WAITING ROOM

When this Orthopaedic Clinic began to plan the waiting area for their new-build facility in Upstate New York, addressing physical distancing was top of mind. As with any new healthcare project in 2020, safety and adaptability were key factors in achieving an optimal layout for these spaces.

The result is a pandemic-friendly space where Calvin seating takes center stage throughout.

Calvin freestanding, single seat

A fluid design approach was taken using laminate and glass panels to add division between visitors while still allowing for easy reconfiguration as needed.

Calvin freestanding offered the designers a holistic solution, providing many models and options while keeping the overall design consistent. Calvin hip chairs assist patients recovering from surgery or injuries, and bariatric seating ensures accommodation for all. Family-friendly layouts include Calvin two-seaters placed with a single-seater and table for ample space.

As we inch closer to 2021, the industry is continuously adapting to new regulations and making the necessary changes to aid in infection control. A layout that's well thought out will allow for flexibility as regulations change and provide a welcomed solution for both healthcare providers and patients.
